

1. Charleswater Dissipative Document Wallets are designed for use within ESD Protected Areas in accordance with EN 61340-5-1. Unprotected documents could hold electrostatic charges that may cause damage to electrostatic sensitive devices.
2. The pocket provides mechanical protection to contents. Documents are inserted into the pocket, which can be clipped into a 2, 3 or 4-ring binder such as [Charleswater Dissipative Ring Binders](#).
3. Inherently static dissipative, charges removed to ground when placed on a grounded working surface or handled by a grounded operator. Dry to the touch, the pocket opens at the top. They are no stick and suitable for photocopies and fax.
4. During normal use the Dissipative Document Wallet is low charging antistatic.
5. They are made of polyethylene modified using durAstatic® technology. These document wallets do not contain additives that bloom to the surface or that are volatile and are therefore suitable for use in clean rooms.
6. The spine of the pocket is reinforced and has eleven holes.

Film properties

Property	Value	Test Method
Material	Inherently Dissipative Polymer (IDP)	
Film thickness	90 micron	
Heat Sealable	Yes	
Colour	Transparent	
Recyclable	Yes	
Surface resistance	$R_S: 1 \times 10^5$ to $< 1 \times 10^{11}$ ohms	IEC 61340-2-3

Item	Insert Size	External Size w x h	Spine	Unit
91230	A4 Portrait 210mm x 297mm	233mm x 306mm	11-hole	100

EN 61340-5-1 "Paperwork inside the EPA shall either be kept in containers conforming to the requirements of table 2 or shall not generate a field in excess of that specified in paragraph 5.3.5 (ESDS should not be exposed to electrostatic fields in excess of 10 kV/m)." Insulative paper, placed upon ESD protected worksurface, can easily interrupt path-to-ground.

Made in Britain

Dimension tolerance: $\pm 10\%$
